

SNx5176B Differential Bus Transceivers

1 Features

- Bidirectional Transceivers
- Meet or Exceed the Requirements of ANSI Standards TIA/EIA-422-B and TIA/EIA-485-A and ITU Recommendations V.11 and X.27
- Designed for Multipoint Transmission on Long Bus Lines in Noisy Environments
- 3-State Driver and Receiver Outputs
- Individual Driver and Receiver Enables
- Wide Positive and Negative Input/Output Bus Voltage Ranges
- ± 60 -mA Max Driver Output Capability
- Thermal Shutdown Protection
- Driver Positive and Negative Current Limiting
- 12-k Ω Min Receiver Input Impedance
- ± 200 -mV Receiver Input Sensitivity
- 50-mV Typ Receiver Input Hysteresis
- Operate From Single 5-V Supply

2 Applications

- Chemical/Gas Sensors
- Digital Signage
- HMI (Human Machine Interfaces)
- Motor Controls: AC Induction, Brushed and Brushless DC, Low- and High-Voltage, Stepper Motors, and Permanent Magnets
- TETRA Base Stations
- Telecom Towers: Remote Electrical Tilt Units (RET) and Tower Mounted Amplifiers (TMA)
- Weigh Scales
- Wireless Repeaters

3 Description

The SN65176B and SN75176B differential bus transceivers are designed for bidirectional data communication on multipoint bus transmission lines. They are designed for balanced transmission lines and meet ANSI Standards TIA/EIA-422-B and TIA/EIA-485-A and ITU Recommendations V.11 and X.27.

The SN65176B and SN75176B devices combine a 3-state differential line driver and a differential input line receiver, both of which operate from a single 5-V power supply. The driver and receiver have active-high and active-low enables, respectively, that can be connected together externally to function as a direction control. The driver differential outputs and the receiver differential inputs are connected internally to form differential input/output (I/O) bus ports that are designed to offer minimum loading to the bus when the driver is disabled or $V_{CC} = 0$. These ports feature wide positive and negative common-mode voltage ranges, making the device suitable for party-line applications.

The driver is designed for up to 60 mA of sink or source current. The driver features positive and negative current limiting and thermal shutdown for protection from line-fault conditions. Thermal shutdown is designed to occur at a junction temperature of approximately 150°C. The receiver features a minimum input impedance of 12 k Ω , an input sensitivity of ± 200 mV, and a typical input hysteresis of 50 mV.

Device Information⁽¹⁾

| PART NUMBER | PACKAGE (PIN) | BODY SIZE (NOM) |
|-------------|---------------|-------------------|
| SNx5176 | SOIC (8) | 4.90 mm x 3.91 mm |
| | PDIP (8) | 9.81 mm x 6.35 mm |
| | SOP (8) | 6.20 mm x 5.30 mm |

(1) For all available packages, see the orderable addendum at the end of the datasheet.

| B | 7 | I/O | RS-422 or RS-485 Data Line |
| V _{CC} | 8 | — | Power Input. Connect to 5-V Power Source. |

7 Specifications

7.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

| | | MIN | MAX | UNIT |
|------------------|--|-----|-----|------|
| V _{CC} | Supply voltage ⁽²⁾ | | 7 | V |
| | Voltage range at any bus terminal | -10 | 15 | V |
| V _I | Enable input voltage | | 5.5 | V |
| T _J | Operating virtual junction temperature | | 150 | °C |
| T _{stg} | Storage temperature range | -65 | 150 | °C |
| | Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds | | 260 | °C |

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values, except differential input/output bus voltage, are with respect to network ground terminal.

7.2 Recommended Operating Conditions

| | | | MIN | TYP | MAX | UNIT |
|-----------------------------------|---|----------------------------|------|-----|------|------|
| V _{CC} | Supply voltage | | 4.75 | 5 | 5.25 | V |
| V _I or V _{IC} | Voltage at any bus terminal (separately or common mode) | | -7 | | 12 | V |
| V _{IH} | High-level input voltage | D, DE, and \overline{RE} | 2 | | | V |
| V _{IL} | Low-level input voltage | D, DE, and \overline{RE} | | | 0.8 | V |
| V _{ID} | Differential input voltage ⁽¹⁾ | | | | ±12 | V |
| I _{OH} | High-level output current | Driver | | | -60 | mA |
| | | Receiver | | | -400 | µA |
| I _{OL} | Low-level output current | Driver | | | 60 | mA |
| | | Receiver | | | 8 | |
| T _A | Operating free-air temperature | SN65176B | -40 | | 105 | °C |
| | | SN75176B | 0 | | 70 | |

- (1) Differential input/output bus voltage is measured at the non-inverting terminal A, with respect to the inverting terminal B.

7.3 Thermal Information

| THERMAL METRIC ⁽¹⁾ | SNx5176 | | | UNIT | |
|-------------------------------|--|----|-----|------|------|
| | BD | BP | BPS | | |
| | 8 PINS | | | | |
| R _{θJA} | Junction-to-ambient thermal resistance | 97 | 85 | 95 | °C/W |

- (1) For more information about traditional and new thermal metrics, see the *IC Package Thermal Metrics* application report ([SPRA953](#)).

7.4 Electrical Characteristics – Driver

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

| PARAMETER | | TEST CONDITIONS ⁽¹⁾ | MIN | TYP ⁽²⁾ | MAX | UNIT |
|-------------------|---|---|--|--------------------|------|------|
| V _{IK} | Input clamp voltage | I _I = -18 mA | | | -1.5 | V |
| V _O | Output voltage | I _O = 0 | 0 | | 6 | V |
| V _{OD1} | Differential output voltage | I _O = 0 | 1.5 | 3.6 | 6 | V |
| V _{OD2} | Differential output voltage | R _L = 100 Ω, see Figure 10 | ½ V _{OD1} or 2 ⁽³⁾ | | | V |
| | | R _L = 54 Ω, see Figure 10 | 1.5 | 2.5 | 5 | |
| V _{OD3} | Differential output voltage | See ⁽⁴⁾ | 1.5 | | 5 | V |
| Δ V _{OD} | Change in magnitude of differential output voltage ⁽⁵⁾ | R _L = 54 Ω or 100 Ω, see Figure 10 | | | ±0.2 | V |
| V _{OC} | Common-mode output voltage | R _L = 54 Ω or 100 Ω, see Figure 10 | -1 | | +3 | V |
| Δ V _{OC} | Change in magnitude of common-mode output voltage ⁽⁵⁾ | R _L = 54 Ω or 100 Ω, see Figure 10 | | | ±0.2 | V |
| I _O | Output current | Output disabled ⁽⁶⁾ | V _O = 12 V | | 1 | mA |
| | | | V _O = -7 V | | -0.8 | |
| I _{IH} | High-level input current | V _I = 2.4 V | | | 20 | μA |
| I _{IL} | Low-level input current | V _I = 0.4 V | | | -400 | μA |
| I _{OS} | Short-circuit output current | V _O = -7 V | | | -250 | mA |
| | | V _O = 0 | | | -150 | |
| | | V _O = V _{CC} | | | 250 | |
| | | V _O = 12 V | | | 250 | |
| I _{CC} | Supply current (total package) | No load | Outputs enabled | 42 | 70 | mA |
| | | | Outputs disabled | 26 | 35 | |

- (1) The power-off measurement in ANSI Standard TIA/EIA-422-B applies to disabled outputs only and is not applied to combined inputs and outputs.
- (2) All typical values are at V_{CC} = 5 V and T_A = 25°C.
- (3) The minimum V_{OD2} with a 100-Ω load is either ½ V_{OD1} or 2 V, whichever is greater.
- (4) See ANSI Standard TIA/EIA-485-A, Figure 3.5, Test Termination Measurement 2.
- (5) Δ|V_{OD}| and Δ|V_{OC}| are the changes in magnitude of V_{OD} and V_{OC}, respectively, that occur when the input is changed from a high level to a low level.
- (6) This applies for both power on and off; refer to ANSI Standard TIA/EIA-485-A for exact conditions. The TIA/EIA-422-B limit does not apply for a combined driver and receiver terminal.

7.5 Electrical Characteristics – Receiver

over recommended ranges of common-mode input voltage, supply voltage, and operating free-air temperature (unless otherwise noted)

| PARAMETER | | TEST CONDITIONS | MIN | TYP ⁽¹⁾ | MAX | UNIT | |
|------------------|---|--|---------------------|-----------------------|------|------|----|
| V _{IT+} | Positive-going input threshold voltage | V _O = 2.7 V, I _O = –0.4 mA | | | 0.2 | V | |
| V _{IT–} | Negative-going input threshold voltage | V _O = 0.5 V, I _O = 8 mA | –0.2 ⁽²⁾ | | | V | |
| V _{hys} | Input hysteresis voltage (V _{IT+} – V _{IT–}) | | | 50 | | mV | |
| V _{IK} | Enable Input clamp voltage | I _I = –18 mA | | | –1.5 | V | |
| V _{OH} | High-level output voltage | V _{ID} = 200 mV, I _{OH} = –400 μA, see Figure 11 | | 2.7 | | V | |
| V _{OL} | Low-level output voltage | V _{ID} = –200 mV, I _{OL} = 8 mA, see Figure 11 | | | 0.45 | V | |
| I _{OZ} | High-impedance-state output current | V _O = 0.4 V to 2.4 V | | | ±20 | μA | |
| I _I | Line input current | Other input = 0 V ⁽³⁾ | | V _I = 12 V | 1 | mA | |
| | | | | V _I = –7 V | –0.8 | | |
| I _{IH} | High-level enable input current | V _{IH} = 2.7 V | | | 20 | μA | |
| I _{IL} | Low-level enable input current | V _{IL} = 0.4 V | | | –100 | μA | |
| r _I | Input resistance | V _I = 12 V | | 12 | | kΩ | |
| I _{OS} | Short-circuit output current | | –15 | | –85 | mA | |
| I _{CC} | Supply current (total package) | No load | | Outputs enabled | 42 | 55 | mA |
| | | | | Outputs disabled | 26 | 35 | |

(1) All typical values are at V_{CC} = 5 V, T_A = 25°C.

(2) The algebraic convention, in which the less positive (more negative) limit is designated minimum, is used in this data sheet for common-mode input voltage and threshold voltage levels only.

(3) This applies for both power on and power off. Refer to EIA Standard TIA/EIA-485-A for exact conditions.

7.6 Switching Characteristics – Driver

V_{CC} = 5 V, R_L = 110 Ω, T_A = 25°C (unless otherwise noted)

| PARAMETER | | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|--------------------|-------------------------------------|--|-----|-----|-----|------|
| t _{d(OD)} | Differential-output delay time | R _L = 54 Ω, see Figure 12 | | 15 | 22 | ns |
| t _{t(OD)} | Differential-output transition time | R _L = 54 Ω, see Figure 12 | | 20 | 30 | ns |
| t _{pZH} | Output enable time to high level | See Figure 13 | | 85 | 120 | ns |
| t _{pZL} | Output enable time to low level | See Figure 14 | | 40 | 60 | ns |
| t _{pHZ} | Output disable time from high level | See Figure 13 | | 150 | 250 | ns |
| t _{pLZ} | Output disable time from low level | See Figure 14 | | 20 | 30 | ns |

7.7 Switching Characteristics – Receiver

V_{CC} = 5 V, C_L = 15 pF, T_A = 25°C

| PARAMETER | | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|------------------|---|---|-----|-----|-----|------|
| t _{PLH} | Propagation delay time, low- to high-level output | V _{ID} = 0 to 3 V, see Figure 15 | | 21 | 35 | ns |
| t _{PHL} | Propagation delay time, high- to low-level output | | | 23 | 35 | |
| t _{pZH} | Output enable time to high level | See Figure 16 | | 10 | 20 | ns |
| t _{pZL} | Output enable time to low level | | | 12 | 20 | |
| t _{PHZ} | Output disable time from high level | See Figure 16 | | 20 | 35 | ns |
| t _{PLZ} | Output disable time from low level | | | 17 | 25 | |

9 Detailed Description

9.1 Overview

The SN65176B and SN75176B differential bus transceivers are integrated circuits designed for bidirectional data communication on multipoint bus transmission lines. They are designed for balanced transmission lines and meet ANSI Standards TIA/EIA-422-B and TIA/EIA-485-A and ITU Recommendations V.11 and X.27.

The SN65176B and SN75176B devices combine a 3-state differential line driver and a differential input line receiver, both of which operate from a single 5-V power supply. The driver and receiver have active-high and active-low enables, respectively, that can be connected together externally to function as a direction control. The driver differential outputs and the receiver differential inputs are connected internally to form differential input/output (I/O) bus ports that are designed to offer minimum loading to the bus when the driver is disabled or $V_{CC} = 0$. These ports feature wide positive and negative common-mode voltage ranges, making the device suitable for party-line applications.

The driver is designed for up to 60 mA of sink or source current. The driver features positive and negative current limiting and thermal shutdown for protection from line-fault conditions. Thermal shutdown is designed to occur at a junction temperature of approximately 150°C. The receiver features a minimum input impedance of 12 k Ω , an input sensitivity of ± 200 mV, and a typical input hysteresis of 50 mV.

The SN65176B and SN75176B devices can be used in transmission-line applications employing the SN75172 and SN75174 quadruple differential line drivers and SN75173 and SN75175 quadruple differential line receivers.

9.2 Functional Block Diagram

9.3 Feature Description

9.3.1 Driver

The driver converts a TTL logic signal level to RS-422 and RS-485 compliant differential output. The TTL logic input, DE pin, can be used to turn the driver on and off.

Table 1. Driver Function Table⁽¹⁾

| INPUT D | ENABLE DE | DIFFERENTIAL OUTPUTS | |
|------------|--------------|----------------------|---|
| | | A | B |
| H | H | H | L |
| L | H | L | H |
| X | L | Z | Z |

- (1) H = high level,
L = low level,
X = irrelevant,
Z = high impedance (off)

9.3.2 Receiver

The receiver converts a RS-422 or RS-485 differential input voltage to a TTL logic level output. The TTL logic input, RE pin, can be used to turn the receiver logic output on and off.

Table 2. Receiver Function Table⁽¹⁾

| DIFFERENTIAL INPUTS A–B | ENABLE RE | OUTPUT R |
|---|--------------|-------------|
| $V_{ID} \geq 0.2\text{ V}$ | L | H |
| $-0.2\text{ V} < V_{ID} < 0.2\text{ V}$ | L | U |
| $V_{ID} \leq -0.2\text{ V}$ | L | L |
| X | H | Z |
| Open | L | U |

- (1) H = high level,
L = low level,
U = unknown,
Z = high impedance (off)

9.4 Device Functional Modes

9.4.1 Device Powered

Both the driver and receiver can be individually enabled or disabled in any combination. DE and $\overline{\text{RE}}$ can be connected together for a single port direction control bit.

9.4.2 Device Unpowered

The driver differential outputs and the receiver differential inputs are connected internally to form differential input/output (I/O) bus ports that are designed to offer minimum loading to the bus when the driver is disabled or $V_{CC} = 0$.

9.4.3 Symbol Cross Reference

Table 3. Symbol Equivalents

| DATA SHEET PARAMETER | TIA/EIA-422-B | TIA/EIA-485-A |

10 Application and Implementation

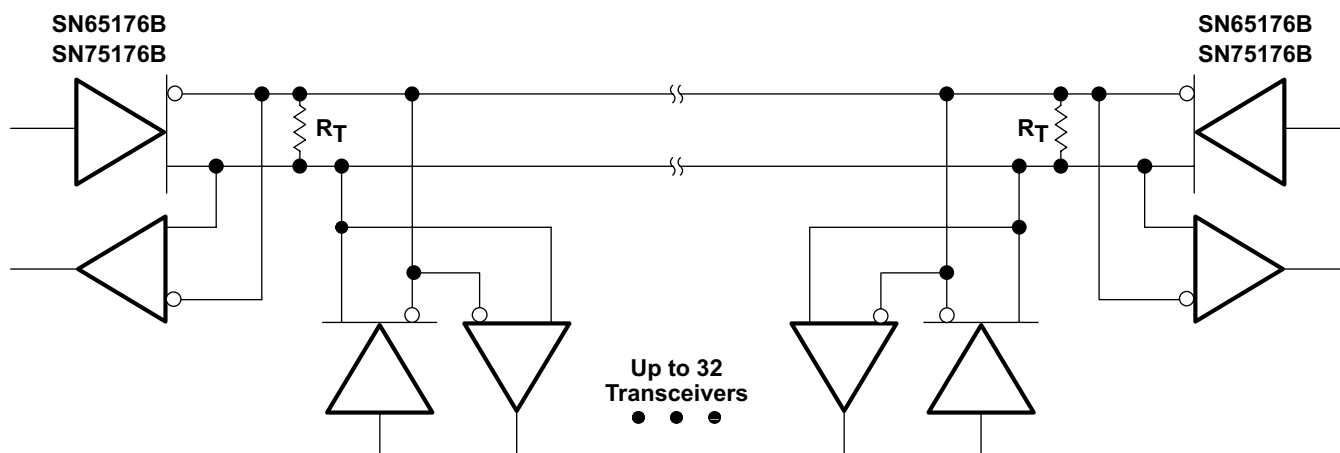

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

10.1 Application Information

The device can be used in RS-485 and RS-422 physical layer communications.

10.2 Typical Application

The line should be terminated at both ends in its characteristic impedance ($R_T = Z_0$). Stub lengths off the main line should be kept as short as possible.

Figure 17. Typical RS-485 Application Circuit

10.2.1 Design Requirements

- 5-V power source
- RS-485 bus operating at 10 Mbps or less
- Connector that ensures the correct polarity for port pins
- External fail safe implementation

10.2.2 Detailed Design Procedure

- Place the device close to bus connector to keep traces (stub) short to prevent adding reflections to the bus line
- If desired, add external fail-safe biasing to ensure +200 mV on the A-B port.

Typical Application (continued)

10.2.3 Application Curves

Figure 18. Eye Diagram for 10-Mbits/s over 100 feet of standard CAT-5E cable
120-Ω Termination at both ends. Scale is 1V per division and 25nS per division

10.3 System Examples

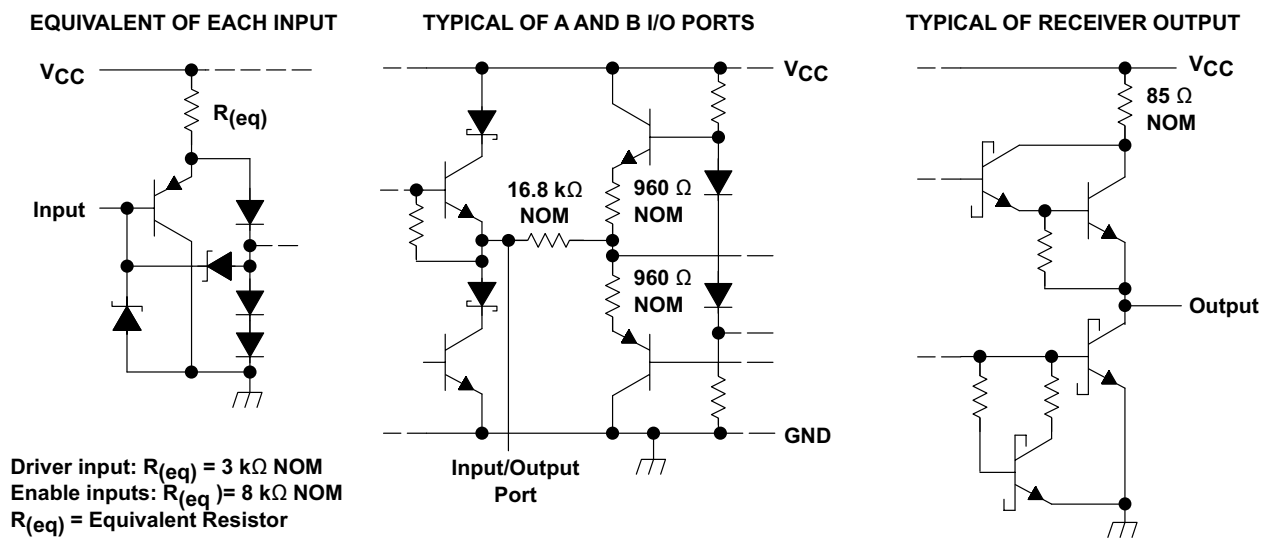

Figure 19. Schematics of Inputs and Outputs

11 Power Supply Recommendations

Power supply should be 5V with a tolerance less than 10%

12 Layout

12.1 Layout Guidelines

Traces from device pins A and B to connector must be short and capable of 250 mA maximum current.

12.2 Layout Example

Layout Diagram

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of ≤ 1000 ppm threshold. Antimony trioxide based flame retardants must also meet the ≤ 1000 ppm threshold requirement.

⁽³⁾ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

⁽⁴⁾ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

⁽⁵⁾ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

TAPE AND REEL INFORMATION

QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE

*All dimensions are nominal

D (R-PDSO-G8)

PLASTIC SMALL OUTLINE

4040047-3/M 06/11

- NOTES:
- A. All linear dimensions are in inches (millimeters).
 - B. This drawing is subject to change without notice.
 - Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.006 (0,15) each side.
 - Body width does not include interlead flash. Interlead flash shall not exceed 0.017 (0,43) each side.
 - E. Reference JEDEC MS-012 variation AA.

D (R-PDSO-G8)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Publication IPC-7351 is recommended for alternate designs.
 - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
 - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

MECHANICAL DATA

PS (R-PDSO-G8)

PLASTIC SMALL-OUTLINE PACKAGE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Body dimensions do not include mold flash or protrusion, not to exceed 0,15.

P (R-PDIP-T8)

PLASTIC DUAL-IN-LINE PACKAGE

- NOTES:
- A. All linear dimensions are in inches (millimeters).
 - B. This drawing is subject to change without notice.
 - C. Falls within JEDEC MS-001 variation BA.

IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
