

CD4046BM/CD4046BC Micropower Phase-Locked Loop

General Description

The CD4046B micropower phase-locked loop (PLL) consists of a low power, linear, voltage-controlled oscillator (VCO), a source follower, a zener diode, and two phase comparators. The two phase comparators have a common signal input and a common comparator input. The signal input can be directly coupled for a large voltage signal, or capacitively coupled to the self-biasing amplifier at the signal input for a small voltage signal.

Phase comparator I, an exclusive OR gate, provides a digital error signal (phase comp. I Out) and maintains 90° phase shifts at the VCO center frequency. Between signal input and comparator input (both at 50% duty cycle), it may lock onto the signal input frequencies that are close to harmonics of the VCO center frequency.

Phase comparator II is an edge-controlled digital memory network. It provides a digital error signal (phase comp. II Out) and lock-in signal (phase pulses) to indicate a locked condition and maintains a 0° phase shift between signal input and comparator input.

The linear voltage-controlled oscillator (VCO) produces an output signal (VCO Out) whose frequency is determined by the voltage at the VCO_{IN} input, and the capacitor and resistors connected to pin C1_A, C1_B, R1 and R2.

The source follower output of the VCO_{IN} (demodulator Out) is used with an external resistor of 10 kΩ or more.

The INHIBIT input, when high, disables the VCO and source follower to minimize standby power consumption. The zener diode is provided for power supply regulation, if necessary.

Features

- Wide supply voltage range 3.0V to 18V
- Low dynamic power consumption 70 μW (typ.) at $f_o = 10 \text{ kHz}$, $V_{DD} = 5V$
- VCO frequency 1.3 MHz (typ.) at $V_{DD} = 10V$
- Low frequency drift with temperature 0.06%/°C at $V_{DD} = 10V$
- High VCO linearity 1% (typ.)

Applications

- FM demodulator and modulator
- Frequency synthesis and multiplication
- Frequency discrimination
- Data synchronization and conditioning
- Voltage-to-frequency conversion
- Tone decoding
- FSK modulation
- Motor speed control

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the devices should be operated at these limits. The table of "Recommended Operating Conditions" and "Electrical Characteristics" provides conditions for actual device operation.

Note 2: V_{SS} = 0V unless otherwise specified.

Note 3: Capacitance is guaranteed by periodic testing.

Note 4: I_{OH} and I_{OL} are tested one output at a time.

Design Information

This information is a guide for approximating the value of external components for the CD4046B in a phase-locked-loop system. The selected external components must be within the following ranges: $R1, R2 \geq 10 \text{ k}\Omega$, $R_S \geq 10 \text{ k}\Omega$, $C1 \geq 50 \text{ pF}$.

In addition to the given design information, refer to *Figure 5* for $R1, R2$ and $C1$ component selections.

Characteristics	Using Phase Comparator I		Using Phase Comparator II	
	VCO Without Offset $R2 = \infty$	VCO With Offset	VCO Without Offset $R2 = \infty$	VCO With Offset
VCO Frequency	 TL/F/5968-7	 TL/F/5968-8	 TL/F/5968-9	 TL/F/5968-10
For No Signal Input	VCO in PLL system will adjust to center frequency, f_0		VCO in PLL system will adjust to lowest operating frequency, f_{min}	
Frequency Lock Range, $2 f_L$	$2 f_L = \text{full VCO frequency range}$ $2 f_L = f_{max} - f_{min}$			
Frequency Capture Range, $2 f_C$	 TL/F/5968-11 $2 f_C \approx \frac{1}{\pi} \sqrt{\frac{2 \pi f_L}{\tau 1}}$		$f_C = f_L$	
Loop Filter Component Selection	 TL/F/5968-12 For $2 f_C$, see Ref.			
Phase Angle Between Single and Comparator	90° at center frequency (f_0), approximating 0° and 180° at ends of lock range ($2 f_L$)		Always 0° in lock	
Locks on Harmonics of Center Frequency	Yes		No	
Signal Input Noise Rejection	High		Low	
VCO Component Selection	Given: f_0 . Use f_0 with <i>Figure 5a</i> to determine $R1$ and $C1$.	Given: f_0 and f_L . Calculate f_{min} from the equation $f_{min} = f_0 - f_L$. Use f_{min} with <i>Figure 5b</i> to determine $R2$ and $C1$. Calculate $\frac{f_{max}}{f_{min}}$ from the equation $\frac{f_{max}}{f_{min}} = \frac{f_0 + f_L}{f_0 - f_L}$. Use $\frac{f_{max}}{f_{min}}$ with <i>Figure 5c</i> to determine ratio $R2/R1$ to obtain $R1$.	Given: f_{max} . Calculate f_0 from the equation $f_0 = \frac{f_{max}}{2}$. Use f_0 with <i>Figure 5a</i> to determine $R1$ and $C1$.	Given: f_{min} and f_{max} . Use f_{min} with <i>Figure 5b</i> to determine $R2$ and $C1$. Calculate $\frac{f_{max}}{f_{min}}$. Use $\frac{f_{max}}{f_{min}}$ with <i>Figure 5c</i> to determine ratio $R2/R1$ to obtain $R1$.

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
